Acknowledgements

The work in this thesis is most certainly not the work of only one person. I have been incredibly fortunate to have not only been supported academically by some tremendous people but to have also made some very good friends during my time in the *MK-groep* and I extend my heartfelt gratitude to you all for your infectious enthusiasm, inspiration and help.

I would like to thank my promoter, Jeff, for giving me the opportunity to come to the Netherlands, to join a magnificent research team, for providing direct access to such a wide array of equipments, for providing the chances to attend international conferences and, above all, for providing a thoroughly enjoyable environment in which to come to work. I am not only thankful for the scientific advice and analysis you provide alongside the freedom to experiment, but I am extremely grateful for the times your door has been open for none ‘work-related’ matters. I know I have already thanked you electronically untold times, but I am truly indebted to you. Van harte bedankt voor alles.

Likewise, my co-promoter, Vasek. To have worked with you has genuinely been a stimulating and joyous time. I am thankful that your door is always open and I am privileged to have learnt so much from you; not only in terms of the results we have achieved, but also in how to approach problems and analysis. I thank you for your friendship on our trips abroad – not least around Texas and Mexico and for your unwavering advice, support and motivation.

Paul, you too are a true inspiration. I want to thank you for all the hours you have spent with me; be it by the arc-furnace, next to the XRD or sitting behind the TEM. I thank you for your genuine interest in my research, for raising discussions, for your relentless drive and for always being available.

I thank Bart for the time you took in teaching me TEM. Likewise, Gert for your help with the SEM and chemical preparations. David, Klaas and Jan for operating the lasers and Yu-tao for all your assistance in hardness and tribological testing.

I extend my gratitude across the globe to Daniel Branagan at NanoSteel for his initial approach at the TMS conference in 2006 and for providing advice and powders for a number of investigations in this thesis. I thank Peter Švec, and Dušan Janičkovič from the Institute of Physics in Bratislava and Hywel Davies, Iain Todd and Nacho Figueroa at The University of Sheffield for kind assistance in preparing metallic glass ribbons. I offer my special thanks also to Kornel Csach, Alena Juríková and Marián Mihalik at the Institute of Experimental Physics in Košice for their collaboration on thermo-mechanical testing and for being so kind and accommodating during my stay in Slovakia.

My room-mates, Stefan, Yueling and Sacha – thank you.

I thank all other members of the *MK-groep* – Pim, Onne, Willem, Siete, Emiel, Toni, Tony, Nuno, Tomas, Alessio, Rocco, Sriram, Swamy, Uko, Alex, Christian, Wouter, Robert, Paknin, Rutger, Marc, Redmer, George, Zhenguo, Lam, Katrina, Changqiang, Gopi, Detsi, Kalpak, Henk†, Maarten, Anton, Jasper and Peter.

Irene, Elly and Manon – thank you so much for all your work that has made life easy for me.

My reading committee, Prof. de Raedt, Prof. Rudolf and Prof. Loosdrecht – thank you for your time, for your kind words and for your suggestions.

Of course, research requires a significant level of funding and for providing this I acknowledge the support of NIMR (now M2i) and FOM, who have been exceptional employers. Thank you for providing freedom and for arranging such excellent personal development courses. To all those who have I met on these courses – thank you for providing a friendly working atmosphere and some memorable social occasions!

My paranimfs. Firstly, Uzi thank you for being a good friend and, now for the second time, working colleague! Lynda, thank you for always being there and for being able to make me laugh.

My family in England, Auntie Catherine and Maureen, my grandparents†, my great auntie's and uncles, my friends, thank you all for the influences you have had on me and for your continuing support.

Mum and Dad – thank you for all your support, your belief and your love. It does not go unnoticed.

Mijn nieuwe familie in Nederland. Gonny, Dick, Maartje, Anneke, Mike, Igor, en Rosalie, hartelijk bedankt voor jullie steun, voor alles wat jullie ons hebben gegeven en natuurlijk voor jullie gezelligheid!

Roos, wow, what an incredible four years! I could probably spend another 180-odd pages telling you how I feel about you, but I just hope you know how utterly proud I am of you and of being with you, how happy I am and how grateful I am for your immense support when things haven't always gone according to plan. Thank you for making me smile, for knowing what makes me tick and for all your love. Ik hou van jou.
